*The cover photo depicts a bunch of individual kidney beans, symbolizing human kidneys coming from various individuals. Although unrecognizable from one another at a first glance, they are not the same. As this work suggests, individual kidneys differ in their susceptibility to chronic renal impairment.*

## Table of Contents

Chapter 1	General introduction and aims of the thesis	9
Chapter 2	Microalbuminuria and endothelial dysfunction: Emerging targets for primary prevention of end-organ damage <i>J Cardiovasc Pharmacol 2006; 47:S151-62</i>	19
Chapter 3	Endothelial function predicts the development of renal damage after combined nephrectomy and myocardial infarction <i>J Am Soc Nephrol 2006; 17:S49-52</i>	43
Chapter 4	Renal endothelial function and blood flow predict the individual susceptibility to adriamycin-induced renal damage <i>J Am Soc Nephrol 2006; provisionally accepted</i>	53
Chapter 5	Selective impairment of myogenic constriction and endothelial function of small renal arteries precedes the development of renal damage in the hypertensive Fawn-Hooded rat. <i>Submitted for publication</i>	69
Chapter 6	Altered myogenic constriction and EDHF-mediated relaxation in small mesenteric arteries of hypertensive subtotaly nephrectomized rats. <i>J Hypertension 2006; in press</i>	95
Chapter 7	Endothelial dysfunction in chronic kidney disease: determinant of susceptibility to end-organ damage and therapeutic response <i>J Nephrol 2006, 19:246-58</i>	115
Chapter 8	<i>Summary and conclusions</i>	139
	<i>Samenvatting</i>	146
	<i>Zhrnutie a záver</i>	151
	<i>Dankwoord, acknowledgements, pod'akovanie</i>	156
